
PRESS RELEASE

Larraioz Elektronika will be presenting in the SPS 2022 of Nuremberg to "Larraioz Basque Automation", the brand of CPU's made in Europe that ensures your supply in times of crisis.

03/10/22

For the first time Larraioz Elektronika will be co-participating in the [SPS – Smart Production Solutions fair](#) in Nuremberg, the largest international exhibitions of electrical automation technology of Europe. The trade show will last 3 days, commencing on Tuesday, 08 November and closing on Thursday, 10 November 2022.

This circumstance is going to be very special for [Larraioz Elektronika](#), as the official Codesys partner in Spain, it is going to be attending the trade show within the Codesys' booth 570 in hall 7 with "[Larraioz Basque Automation](#)", his most exclusive brand that produces CPU's. The attendees will have the chance to spot on site his in house designed and manufactured CPU's.

LARRAIOZ BASQUE AUTOMATION AS A MANUFACTURER

Faced with production problems from Asia, uncertain lead times, possible border closures and poor product quality, Larraioz is putting the value of its 100% European production, which is carried out in its central facilities in Aia, Basque Country. As of 2020, they have already manufactured more than 20,000 devices, providing a unique PC, PLC, HMI and Motion solution for the machine.

With Larraioz Basque Automation systems, the OEM obtains a proprietary product customized to its hardware requirements, at a cost adjusted to its needs (no economic charges for unneeded devices or need for amortization of unimplemented components) and a protection against product obsolescence and new hardware compatibility. Furthermore, it would give the possibility to create user-friendly and intuitive applications within the system.

Another advantage of using Larraioz Basque Automation systems is the use of CODESYS to implement your own programmable or configurable automation components. For this purpose, a runtime system is installed. Using the available product options, the functional scope of their device can be flexibly defined, in the same way as it is done in a conventional PLC. The options include integrated products for visualization, motion control, and connection to fieldbus and Industrial Ethernet systems.

Larraioz Basque Automation emphasizes the non-obsolescence of their products. They understand that the acquisition of an industrial control device can become a difficult purchase, as key element, it becomes the center of the machine and / or the process, and at the same time, it's known of the expiration of itself. For this reason, Larraioz Automation manufactures customized and scalable systems, which have no end of life, so the problems of obsolescence disappear consequently.
